

WELCOME TO

"Step Right UP.....experience the strange, the unexplainable, the UNSPEAKABLE underworld of our

AMAZING ARTHROPODS!

All Real, All Alive.....OR ARE THEY?!

YOU BE THE JUDGE!

Let Dr. Entomo be your guide as you explore the wonderful world of bugs in all their strange splendor. From glow-in-the-dark scorpions to the world's biggest bird-eating tarantula, Dr. Entomo's living examples will fascinate visitors of all ages!

EXHIBIT OVERVIEW

DESIGN ELEMENTS AND STORYLINE

To capture the essence of the traveling circus, large, colorful hand-painted banners introduce the visitor to the inhabitants they are about to meet. They also give the first impression of the topic about to be explored, and delineate each section of the exhibit. The exhibit is divided into the following sections:

- *Introduction/Entrance
- *Glowing Terror
- *Living Mummies
- *Mama Nature's Chemical Factory
- *The Devil with Two Heads
- *Theatre of the Macabre
- *Dr. E's Kitchen Cabinet of Curiosities
- *The Gaff

Reminiscent of a traditional circus sideshow, this exhibit features more than two dozen bugs that showcase their unique diversity and life habits under the guise of unusual monikers, such as the Two Headed Devil, Glowing Terror and Sumo Bugs to name only a few.

Suitable for all ages, this exhibit is family-friendly in its design and content.

Each section presents a new concept based on the natural history of the animal(s) on display. In some instances, the visitor is challenged to question their own beliefs about the true value of bugs, and presents many opportunities for independent learning.

DR. ENTOMO'S INTRODUCTION

COME ONE, COME ALL!

Join me, DR. ENTOMO, as we explore
the STRANGE, the UNUSUAL....the
DOWNRIGHT DISTURBING

**WORLD OF
ARTHROPODS!**

**ARTHROPOD?
WHAT IS THAT?**

Better known as 'BUGS' to you and me,
ARTHROPODS are the group of animals
that have NO INTERNAL SKELETON!

How could that be??

They only have a
HARD, OUTER COVERING,,
or **EXOSKELETON,**
holding them together!

**Incredible,
BUT TRUE!**

In this first section of the exhibit, the visitor is introduced to Dr. Entomo himself. Is he a man? A bug? A little of each? The first of many mysteries to unravel in this fascinating exhibit.

GLOWING TERROR

This section of the exhibit explores one of the great mysteries of the bug world - scorpions give off an eerie green glow when placed under a blacklight.

Animal(s) on Display:
Emperor Scorpions

Interactive:
Push Button-Activated Black Light

LIVING MUMMIES

This section of the exhibit explores the unusual life cycles of insects, using the Darkling Beetle in every life stage as the living examples. The pupae of this beetle is suggestive of a mummified corpse, tightly wrapped while awaiting rebirth.

Animal(s) on Display: Giant Mealworms, Mealworm Pupae, Adult Beetles

MAMA NATURES' CHEMICAL FACTORY

Some bugs use bad-tasting or even poisonous chemical secretions to ward off would-be predators. This unusual defense mechanism is discussed in this section of the exhibit.

Animal(s) on Display: Giant Millipedes, Giant Vinegaroons

Interactive: Vinegar Extractor and Vaporizer

THE DEVIL WITH TWO HEADS

Centipedes are a unique living example of the double-headed defense mechanism - they appear to have a head at each end of their body!

This "devilish" bug is showcased in a recreated Hell on Earth, complete with a red lighting in a cave-like habitat.

Animal(s) On Display: Giant Vietnamese Centipede

ROGUE'S GALLERY OF CRIMINALS

Feast your eyes on some of the most notorious and dangerous bug criminals in our time - OR ARE THEY?

The Rogues Gallery explores common myths and misconceptions in a fun and engaging way. By presenting bug "criminals behind bars", the visitor is asked to decide the guilt or innocence of each individual, based on their supposed crime.

Animal(s) On Display: Rosehair Tarantula, Brazilian Black and White Tarantula, Black Widow Spider, Wolf Spider, American Cockroaches, Desert Hairy Scorpion, House Crickets, Praying Mantis, Goliath Bird Eating Tarantula.

THEATRE OF THE MACABRE

Bugs not only look creepy, but some of the things that they do are downright disturbing! From using balls of dung and even living spiders for nurseries to sumo-wrestling beetles, this section highlights some weird and whacky bug behaviors!

Mounted Specimens On Display:

Dung Beetles, Tropical Butterflies, Stag Beetles.

THE GAFF

"BEHOLD THE TER-ANT-ULA: PART TERMITE, PART ANT,
PART TARANTULA, ALL TERROR!!"

What sideshow would be complete without the inclusion of a fantasy creature that challenges you to decide: Is It Real?
Or Is It a Fake?

Mounted Specimen On Display: Ter-Ant-Ula

DR. E'S KITCHEN CABINET OF CURIOSITIES

A trip around to the other side of this component reveals a "Seek and Find" mural showcasing the amazing "invisible" stick insects - now you them, now you don't!

Mounted Specimens On Display: Asian Stick Insects, preserved water bugs, scorpions, and other edible bugs.

Animal(s) on Display: Madagascan Hissing Cockroaches

Bugs...as FOOD?? With even the World Food Organization promoting bugs as a good source of protein, Entomophagy has become a hot topic. A visit to Dr. Entomo's Kitchen Cabinet reveals a "taste" of some buggy delights.

SPECIFICATIONS

EXHIBIT SIZE: 2,500 - 3,000 Square Feet

Please CONTACT US for RENTAL FEES and AVAILABILITY

RENTAL FEE INCLUDES:

- * On Site Installation by Outhouse Staff
- * All Arthropod livestock throughout the run of the exhibit
- * Staff training and support throughout the run of the exhibit
- * Tear Down and packing of exhibit by Outhouse staff at venue's end
